Creating & Designing
Cosmetic Packaging Solutions Since 1975.

CERTIFICATIONS
Lumson Headquarters and both its manufacturing sites in Capergnanica (CR) and in S.Maria di Sala (VE) are certified UNI EN ISO 9001:2008.
Lumson Headquarter and the manufacturing site in Capergnanica (CR) are certified UNI EN ISO 14001.

RESEARCH & DEVELOPMENT
Lumson Design Team creates new packaging collections according to the latest Design and Fashion trends or to the rising market needs.

Lumson Technical Dept. develops the ideas using the latest technologies and a high level of innovation.

Lumson Validation Dept. checks, tests and validates every single item, to ensure they are made and manufactured according to Lumson’s standards.

MANUFACTURING
Lumson uses the latest technologies and advanced machinery to ensure a perfect manufacturing process.

MANUFACTURING LINES (IN HOUSE)

Spraying, Screen Printing, Tampo Printing, Hot Stamping.
Airless System
Packaging Solutions
Airless Pouch Technology is a revolutionary Airless System for cosmetic packaging, designed, patented and manufactured by Lumson. This system can be supplied in a glass bottle (TAG - Techno Airless Glass) or in a plastic bottle (APP – Airless Plastic Packaging).

**TAG SYSTEM-TECHNO AIRLESS GLASS: AVAILABLE WITH 3 DIFFERENT DESIGNS**
- **TAG 355**: a cylindrical glass bottle with a onebody pump and overcap.
- **TAG LUXEA**: a new original design made of a semi-spherical shape spaced out by two flat surfaces, with extra thick base to enhance the beauty of the glass, and with its specific pump and overcap.
- **TAG DeLuxe**: a high-end cylindrical glass bottle specifically designed with extra thick base to enhance the beauty of the glass and with a onebody pump and overcap.

**“GLASS ENHANCER”: A UNIQUE DECORATION FOR TAG SYSTEM**
Lumson designed and developed a special decoration only for its TAG systems. The “GLASS ENHANCER” consists of a spray colouring on the inside of the glass bottle to enhance the beauty of glass by showing the clear and thick base of the bottle. This creates unique and innovative visual effects (also available with pearled and metallized colours).

**APP-AIRLESS PLASTIC PACKAGING: AVAILABLE WITH DIFFERENT MATERIALS**
APP’s plastic bottle can be easily customized with different shapes as Lumson’s Airless Pouch Technology can be applied to any kind of bottle design.
The APP is available in PETG (APP 355 and APP 355 S) or PE (APP Start) and PE SOFT TOUCH (APP Touch).

## Reason to Choose

**TYPES OF POUCHES**
TAG and APP pouches can be manufactured according to client’s formula to supply a standard or an extra barrier protection for maximum compatibility.

**PROTECTION FOR SPECIAL ADVANCED FORMULAS**
New innovative and improved formulations need to maintain stability of specific ingredients. Airless Pouch Technology helps to preserve sensitive cosmetic ingredients, such as vitamin C, Retinol, etc., from deteriorating.

**REDUCTION OF PRESERVATIVES**
The market is concerned about reducing preservatives. With the use of Lumson’s Airless Systems, exterior air contamination is eliminated and a sensible reduction of preservatives may be possible.

**A WIDE RANGE OF DECORATION OPTIONS**
TAG Techno Airless System and APP Airless Plastic Packaging is highly customizable with a wide range of colours and decorations.

**VERY LITTLE PRODUCT RESIDUE**
Final consumers are very sensitive about residual product left in the pack. TAG and APP guarantee a dispense rate of more than 95%, so your clients may get the entire product they have paid for.
TAG and APP: Responsible Recycling Packaging

After use, the final consumer can easily separate the external bottle from the pouch that contained the product and dispensing components. These two elements may then be disposed of separately, each one in its proper recycling chain.

“TO INFORM CONSUMERS”

In order to promote TAG and APP’s after usage recycling feature, Lumson has designed, developed, and patented two special different logos that can be used by its customers (free of charge) to inform final users about the possibility to separate the external bottle, for a more responsible recycling process.
